# **Trauma System Activation – Trauma Code Criteria**

<b>Review Date:</b>	Change Description:
02/26/2018	
<b>Revised Date:</b>	Change Description:
02/26/2018	Updated procedure to include SPOK mobile down procedure; no changes to policy

#### **Applies to:**

Physicians (MD/DO) and nurses (RN) and other staff involved in the care of trauma patients.

#### **Policy:**

The Trauma System is the comprehensive trauma team and resources necessary to care for our trauma patients. This comprehensive team includes but is not limited to: Emergency Department, EMS, trauma surgery, radiology, Adult/Pediatric OR, SICU/PICU, inpatient floors and acute rehabilitation. In order for the Trauma System to function optimally, early activation of the system is necessary. Trauma codes will be activated according to the trauma code criteria by the Emergency Department Attending or ED RN in accordance with Procedure PROC CM T-28A. The trauma activation or consult will be documented in Epic by ED Registration. The trauma level activated cannot be downgraded once activated. It can be upgraded based on discretion.

#### Process: See Procedure PROC CM T-28A

Criteria:

#### Adult Trauma Code Criteria – Age 15 - 69 Level I Trauma Criteria **Airway** In need of emergent airway ٠ Intubated in the field • **Breathing** • Ongoing respiratory compromise Respiratory arrest • Circulation SBP < 90• Clinical Signs of Shock ٠ Neurological $GCS \leq 9$ Open skull fracture Anatomic Diagnosis Penetrating trauma to head, neck, torso, groin or proximal to knee or elbow (unless obvious or known superficial injury only) Partial or complete amputation of major limb (not isolated hand/finger injury)

#### May upgrade any level per ED Physician Discretion

Page 2 of 5

# Adult Trauma Code Criteria – Age 15 – 69 (continued)

Level I Trauma Criteria (continued)

#### Pregnant Trauma Patients

>23 weeks (Fundus palpable at or above umbilicus) Meeting Level I or Level II criteria

#### <u>Burns</u>

- Any burn patient who also meets level I criteria
- Inhalation with unsecured airway

#### May upgrade any level per ED Physician Discretion

## Geriatric Level I Trauma Criteria – Age >70

#### <u>Airway</u>

- In need of emergent airway
- Intubated in the field

#### **Breathing**

- Ongoing respiratory compromise
- Respiratory Arrest

#### **Circulation**

- SBP <100
- Clinical Signs of Shock

#### <u>Neurological</u>

- GCS <=9
- Open skull fracture

#### <u>Anatomic</u>

- Penetrating trauma to head, neck, torso, groin or proximal to knee or elbow (unless obvious or known superficial injury only)
- Partial or complete amputation of major limb (not isolated hand/finger injury)

#### <u>Mechanism</u>

• High risk MVC (death of another occupant, intrusion of 12 inches in passenger compartment.

#### May upgrade any level per ED physicians discretion

# Level II Trauma Criteria

#### Trauma Patients who meet any of the following and *do not meet* any Level I Criteria:

- Intubated inter-facility, otherwise stable, who also doesn't meet any level 1 criteria
- Depressed skull fracture
- Fall from height (> 15 ft)
- Severe maxillofacial trauma
- Pedestrian struck thrown, run over with significant impact (>20 mph)
- Motorcycle, ATV or snowmobile crash with severe injury
- Suspected or actual unstable pelvis without hypotension
- Blast injury
- Suspected or actual spinal cord injury
- Burns with greater than or equal to 20% TBSA
- Inhalation injury with secure airway
- Crush injuries

#### May upgrade any level per ED Physician Discretion

Drive Innovation & Discovery Respect People Serve our Community Value Integrity Embrace Diversity & Inclusion See MCN Policy Manager System for the latest version.

# Adult Trauma Code Criteria – Age 15 – 69 (continued) Level III Trauma Criteria (Consult)

Trauma Patients with any of the following and who do not meet Level I or Level II:

- Prolonged extrication time
- Patient with traumatic mechanism of injury who will be admitted to any service Patient over 70 years of age with traumatic mechanism of injury who will be admitted
- Transfer from another hospital
- High risk MVC (death of another occupant, intrusion of 12 inches in passenger compartment, ejected from another vehicle, rollover)
- Fall in patient taking anticoagulant

May upgrade any level per ED Physician discretion

CM T-28 Page 4 of 5

# Pediatric Trauma Code Criteria- Age 0 - 14

# Level I Trauma Criteria

#### <u>Airway</u>

• Intubated/assisted ventilation from the scene or transferred from another facility

#### **Breathing**

- Respiratory arrest
- Respiratory distress

Age	<b>Respiratory Rate</b>
0-5 mos.	< 20
6 mos12 yrs.	< 16
13 yr-14 yr	< 12

#### **Circulation**

- Clinical signs of shock
- Patients who are receiving blood

Age	SBP	Pulse
0-5 mos.	< 60	
6 mos5 yr	< 70	<70
6 yr-14 yr	< 80	< 60

#### <u>Neurological</u>

• GCS <= 12 or deteriorating by 2

#### **Anatomic Diagnosis**

- Penetrating injury to head, neck, torso, groin, extremities proximal to elbow/knee
- Flail chest
- Open chest wound
- Crush Injuries
- Open or depressed skull fracture
- Complete/partial amputation or de-gloving above the wrist or above the ankle

#### <u>Burns</u>

- Who meet Level I trauma criteria
- Inhalation injury w/unsecured airway

May upgrade any level per ED Physician Discretion

## Level II Trauma Criteria

# Trauma patients with any of the following and who *do not* meet Level I:

- Suspected spine or spinal cord injury
- Bilateral femur fractures
- Pelvis fracture
- Severe maxillofacial injury
- Pedestrian struck at 20 mph or greater

#### <u>Burns</u>

• Inhalation injury w/secured airway

May upgrade any level per ED Physician Discretion

## Level III Trauma Criteria (Consult)

Trauma patients with any of the following and who *do not* meet Level I or Level II:

- Falls over 10 feet
- Passenger ejected from a motorized vehicle
- Death or severe injury of same car occupant
- Prolonged extrication >20min
- Passenger compartment invaded >12 inches
- Transfer from another hospital with a known intracranial hemorrhage

#### May upgrade any level per ED Physician Discretion
