COURSE OBJECTIVES

Following this program the participant will be able to:

1. Correlate neuroanatomy and neurophysiology with psychopharmacology and psychotropic drugs.
2. Discuss the general principles of prescribing psychotropic medications to adult clients, including related ethical and legal issues.
3. Describe indications, targeted effects, drug interactions, side effects and potential adverse effects of common psychotropics, including:
 - Antipsychotics
 - Antidepressants
 - Mood stabilizing agents
 - Anxiolytics
 - Cognitive enhancers
4. Explain current protocols for the treatment of common mental health conditions such as mood disorders, anxiety disorders and thought disorders.

Coming this Spring!

"Psychopharmacology, Pediatric Edition"

A review of psychotropic medications commonly used in the care of children.
