## **Create a Cmap**

From the "Views - CmapTools" window:

#### Select File, then New Cmap.

(The keyboard shortcut Ctrl+n may also be used.)

🗿 Views - CmapTools 👘	· · · · · · · · · · · · · · · · · · ·	- 🗆 🛛

A new Cmap with the name "Untitled 1" will open.

### Add a Concept

From an open Cmap:

Using the left mouse button, double-click anywhere on the Cmap. (You may instead right-click anywhere on the Cmap and select **New Concept** from the menu that appears.) A shape will appear with question marks inside of it.

Type in a label to replace the question marks. Left-click on a white portion of the Cmap outside of the shape to set the label. The shape has now become a new **concept**.

# **Create a Proposition from One Concept**

From an open Cmap:

Left-click on the concept you would like to make a new proposition from.

Left-click and drag from the arrows at the top of the concept. As you continue to hold the mouse button down, notice that an arrow from the selected concept will follow around the mouse pointer. (Another way to make the arrow follow the mouse pointer is to left-click once on the concept arrows, then release the button before moving the mouse.)

🔬 (	Jntitle	ed 1					-

#### Save a Cmap

From an open Cmap:

Select **File**, then either **Save Cmap** if you intend to save editing on an existing Cmap, or **Save Cmap As** to save a new Cmap. We will use **Save Cmap As** to demonstrate how to save a new Cmap.

The "Save Cmap As" window will appear. Here, you can label your Cmap, give it a focus question, and assign keywords to it. The Author, Organization, and Email text fields are where you can add additional identifying information. These fields may be already filled with default values. The values are taken from **Preferences...** under **Edit** from the "Views - CmapTools" window.

#### **Open a Cmap**

From the "Views - CmapTools" window:

Highlight the Cmap that you wish to open. Select **File**, then **Open** to have the Cmap open in another window. (Using the left mouse button and double-clicking the title (or icon) of a Cmap, or highlighting its title and pressing Enter, are alternate ways to open a Cmap.)

#### **Print the Cmap**

When printing a Cmap, it is best to first go to the Print Preview.

From an open Cmap:

Select File, then Print Preview...

You will now see the **Print Preview** window. From here, you can choose your page orientation, and set how many pages the Cmap should be printed on, using the **Page Layout** dialogue.

🚇 Print Preview	<b>X</b>
	Plants have Roots
Orientation	Page Layout
<ul> <li>Portrait</li> </ul>	1 Page(s) Wide
O Landscape	1 Page(s) Tall
Printer Info	
Resolution (DPI)	600
Page Setup	Cancel Ok Print

Use the **Page Setup** button to set additional settings, specific to your printer. If you hit the **OK** button, the settings will be saved and you can print later, or you can hit the **Print** button to print immediately.

#### Modify Linking Lines 4pt Bezier 3pt Bezier Splines Vectors Add Control Points Thickness Style

From an open Cmap:

Modifying linking lines can be useful when adding new Cmap items onto propositions. You can apply the different techniques found in the help sections **Create a New Proposition from One Concept** and **Create a Proposition from Existing Concepts** to add concepts to existing propositions. One type of modified link, the curved link, can be used to complete the addition of a concept to a proposition.

Left-click the arrows of an existing concept or linking phrase to have an

The "Styles" window will open to the **Line** dialog. Left-click the button under the **Shape** heading to reveal the different curving options for your linking line. In our example, we'll use the **Make 4pt Bezier.** button so that we may fine tune our curve.

When you return to the Cmap, you'll notice a small white box in the middle of the line you have selected to curve. The small white box in the middle of the line actually consists of two boxes or **points**, one on top of the other. Using the left mouse button, drag one of the two overlapping points from the middle of the line out to a desired location on the Cmap.

Now drag the remaining middle point out to finish the curve.

When you have completed the adjustments of your curve, left-click on a white portion of the Cmap to set the curved link.

🗛 I	Anato	my of a	Plant				-	
File	Edit	Format	Collaborate	Tools	Window	Help

			Ro	oots				
			Lea	aves				
<		1111	]				>	

From the "Styles" window:

To curve a linking line by using the corner of an adjustable triangle for reference, left-click the **Make 3pt Bezier.** button.

Adding additional control points to a link will give you more control over the link's shape.

🜆 Anaton	ny of a l	Plant

		Lea	Des		\$		
<	Ш					>	

You can curve links in different ways by adding additional control points, and by making use of **Make Splines.** from the **Line** dialog in the "Styles" window.

From the "Styles" window:

The **Line Thickness** button allows you to modify how thick, or thin, you want a linking line to appear.

Now when viewing the Cmap, the thickness of the linking line you selected has changed.

🗛 I	Anator	ny of a	Plant				-	
File	Edit	Format	Collaborate	Tools	Window	Help

							_	
			Pla	ants				<b>B</b>
			ha					
			Ro	oots	)			
			<b>G</b> Lea	aves				
<							>	

From the "Styles" window:

The **Line Style** button allows you to modify a linking line's appearance with the use of a solid pattern, or a combination pattern of dots and/or dashes.

Now when viewing the Cmap, the linking line you selected will appear in the line style you chose.

From an open Cmap:

All items of a Cmap, except the **resource link group icon** (described in the help section **Drag in Resources**), can change color. To change the color of a linking line, select the line by right-clicking it, then left-click **Line...** from the menu that appears. (Notice that a linking line may have a different shape than an actual line. More information on different types of linking lines can be found in the help section **Modify Linking Lines**.)

The "Styles" window will open to the **Line** dialog. Moving the mouse over the **Color** button makes a box appear that indicates what type of object will be affected when a color change is made.

Styles 🛛 🛛 🔊
Color Thickness Style
Shape Line Color tion Direction
Arrowheads
Y Y Y Y
Font Object Line Cmap
Unnamed New Style

Left-clicking the **Color** button will reveal a palette of common colors that are selectable using the mouse. **No Fill** will change the color of an item (other than the background) to transparent. Left-click the **More Colors...** button to choose a particular color not shown in the palette.

The "Choose a Color" window opens to the **Swatches** dialog where you can pick a color from an expanded palette. The color currently chosen appears in the **Preview** panel. Selectable swatches of previously chosen colors are under the **Recent:** heading. Left-click the **HSB** tab at the top of the window to further explore your color options.

🗛 I	Anato	my of a	Plant					- X

Now when viewing the Cmap, the distance has changed between the text and the border of the concept.

# Add Arrows to Linking Lines

From an open Cmap:

You can change the directional emphasis within propositions by using arrows. To change how arrows are used in propositions, begin by selecting the proposition(s). Right-click the selection, then left-click **Line...** from the **Format Style** sub-menu. (You may also modify the arrow behavior of specific lines by narrowing your selection to only those lines you want to change. The help section **Change Colors** explains different methods of selecting Cmap items, including linking lines.)

The first concept, that a proposition is created from, is initially treated by CmapTools as the **root** or **parent**. To have the linking phrase(s) from the parent concept point at all **children** concepts, left-click the button illustrated below under the heading **Arrowheads**.

Styles 🛛 🛛	
Color Thickness Style	
<u> </u>	
Shape Connection Direction	
Arrowheads	
Draw Arrowheads if the	Connections end at a Concept.
Font Object Line Cmap	
Vnnamed New Style	

Now when viewing the Cmap, selected linking lines will point from linking phrases to children concepts.

#### Change Backgrounds Change Cmap Background Change Concept Background

From an open Cmap:

You can make an image appear in the background of a Cmap. To give a Cmap a background image, right-click a clear portion of the Cmap, then left-click **Add Background**.

The "Choose Background" window will open so that you may locate an image file. Left-click **OK** to place the selected image into the background of the active Cmap.

🛃 Choose Background				×
📃 My Cmaps	~	1	<u>0</u>	٩
📸 Foliage				
		ĸ	Can	cei

Now when viewing the Cmap, the background image selected appears as the Cmap's background.

From an open Cmap:

You can make an image appear in the background of a concept. To give a concept a background image, right-click the concept, then left-click **Object...** from the **Format Style** sub-menu.

## **Using Autolayout**

CmapTools contains a tool that can arrange your Cmaps in a logical manner.

From an open Cmap:

Select Format, then Autolayout...

If you want to do Autolayout on the entire Cmap, do not have any concepts or linking phrases selected.

On larger Cmaps, you can use Autolayout on parts of the Cmap by selecting the objects you wish to format.

This will open the **Autolayout** window.

Autolayout	Sector 201			
Apply Layout to Whole Cmap				
<ul> <li>Apply Layout to Selection only</li> </ul>				
Hierarchical Force - Directed				
Horizontal Hierarchy				
Nodes per Level	Minimum Spacing			
<ul> <li>Unlimited</li> </ul>	Horizontal 25			
🔿 No more than 🛛 4	Vertical 25			
Line Shape Nat	vigation Tool			
Straight	Plants			
Polylines	7			
Bezier's	have			
Splines	Roots			
Generate New Layout OK Cancel				

The two tabs (**Hierarchial & Force Directed**) near the top of this window contain options for different ways of formatting the Cmap.

#### Export Cmap as an Image

From an open Cmap :

Click File, then Export Cmap As, then Image File...

You will now see the "Export Cmap as Image File" window.

The file name will default to the name of your Cmap. Use the drop down menu to choose what type of image file you want the Cmap saved as.

Click Save when ready.

📓 Export Cmap as Image File 🛛 🛛 🔀				
Save in:	: 📋 My Docume	ents 💽 🤌 📂
