- Blurred vision
- Dizzy
- Nausea and vomiting

All medicines have the potential to produce effects other than the intended use of the medicine. The chance of experiencing a side effect depends on the medicine, how it is used, what other medicines a person is taking, and individual traits such as age, weight, and other diseases. Some people have no side effects, some mild, some severe.

If you experience any of these side effects tell your doctor or nurse right away.

This medication is used in combination with rest, physical therapy, pain medications and other therapies. If you are taking this medication for several weeks, talk with your health care provider before stopping. Avoid driving or doing tasks until you know how this medication affects you.

Please speak up at any time if you have any questions or concerns.
