Possible side effects:
- Dizziness
- Diarrhea
- Dry eyes

All medicines have the potential to produce effects other than the intended use of the medicine. The chance of experiencing a side effect depends on the medicine, how it is used, what other medicines a person is taking, and individual traits such as age, weight, and other diseases. Some people have no side effects, some mild, some severe.

If you experience any of these side effects tell your doctor or nurse right away.

Important information If taking this medicine for high blood pressure ask your doctor before starting any over-the-counter medications as your blood pressure could go up from taking both. Get up slowly when moving from a sitting or laying down position to standing up as this medication can cause dizziness.
