Floors: Vinyl Floor Sealing

Purpose: To apply a floor sealer to all vinyl floors within the facility.

Procedure:

1. Sweep the floor thoroughly to remove dust, dirt, and debris.
2. Place three “Wet Floor” signs approximately eight feet apart along one half of the floor.
3. Spray the mop head with water to dampen.
4. Line bucket with plastic bags then pour required amount of sealer into the bucket for area application/ Ready fast track application system if available.
5. Saturate mop with sealer.
6. Wring out bottom half of mop tightly, so that sealer will not drip.
7. Apply a thin coat of sealer over the entire area using a “figure eight” motion. Avoid baseboards and walls.
8. Let dry.
9. Repeat steps, as needed, to add thin coats. No more than 3 coats.
10. Self inspect work.
11. Properly discard any unused sealer. If possible return to sealer pail.
11. Clean equipment and store in an orderly fashion.
