

Informatics, Quality & Safety

3 Credits

This course focuses on the skills and knowledge needed to promote quality, maintain patient safety, and information across healthcare settings. The course combines evidence-based concepts from technology, information science, communication studies, patient safety, organizational quality, and health care science to prepare nurses to participate in the process of improving health care quality and safety. Content explores current and potential uses for technology in transforming health care. Emphasis is on retrieving and interpreting information to promote positive patient outcomes.
