

Professional Role Development II: Applying Evidence-Based Practice

3 Credits

This course focuses on issues involved in the appraisal and use of research evidence and in the conduct of research. Identification and analysis of research related to clinical practice and health care outcomes are included. Theoretical and evaluation processes relevant to nursing practice are addressed. The course will prepare the student to synthesize the results of existing research in an area of interest, to initiate collaboration with others in developing and continuously improving a practice based on research as evidence, and to understand the research expectations for advanced practice nurses. A basic understanding of research terms, the quantitative research process, and statistics is expected of students who enter the course.
