

Innovation in Information, Quality and Safety

3 Credits

This course focuses on the skills and knowledge needed to manage information, promote quality and maintain safety across healthcare settings. Collaborative and diverse opportunities to bring about improvement in healthcare are included. The course combines evidence-based concepts from technology, information science, communication studies, organizational quality, and health care science in order to prepare clinicians to take an active role in transforming healthcare and clinical practice. Emphasis is placed on the nurse's active role in retrieving, interpreting, and sharing information to support an evidence-based clinical practice.
