

Advanced Nursing Research

3 Credits

This graduate level course examines quantitative and qualitative nursing research methods, principles, and methods of measurement, as well as skills for critical evaluation of nursing research. Identification and analysis of research related to clinical practice and health care outcomes are included. Students develop skills and knowledge needed to review and recognize the strength of evidence and recommend practice changes if indicated. This course builds upon previous knowledge of the research process, critiquing of research, and understanding of the application of statistical findings.

Pre/corequisites: None.
