

Clinical Management/FNP I

6 Credits

This is an entry level clinical course in which the student integrates basic knowledge of human anatomy and physiology and builds on advanced health assessment knowledge. Students develop an understanding of the pathologic changes and clinical manifestations that characterize common acute disorders. Students apply new understanding of pathophysiology and evolving clinical decision making skills to the interpretation of assessment data and the diagnosis and treatment of primary care clients and their families across the lifespan. Students perform complete health assessments and provide client care with supervision. In collaboration with the health care team, students are involved in the implementation and evaluation of accepted medical and nursing interventions and integrate research, teaching and consultation skills as a beginning basis for clinical practice.

Pre/corequisites: NURS 612, NURS 565, NURS 607, NURS 616
