

Clinical Management/AGNP-PC II

6 Credits

This course reflects a building of knowledge and skills from the previous clinical course, Clinical Management in Primary Health Care: AGNP-PC I. Students continue to progress in the nurse practitioner role and in the delivery of health care to individuals with acute and chronic health care needs. In collaboration with the health care team, students are involved in implementing and evaluating accepted medical and nursing interventions used in the primary care of patients from young adulthood through old age. Effective use of skills required for clinical management, education, consultation, referral, and follow-up are emphasized. Therapeutic interventions based upon evidenced-based research are integrated along with complimentary and alternative healing approaches appropriate for individuals and their families with health care problems. Course work, classroom activities, and clinical assignments enhance students' critical thinking and decision-making skills for complex health care problem evaluation.

Pre/corequisites: NURS 640, NURS 656.
