

Evaluation of socioeconomic features in  
patients undergoing endovascular  
thrombectomy

A 5- year single institution review

George Koutsouras, Dan Draystel, Josh Onyan, Michelle  
Valleluga, Pat Veinot, Grahame Gould

# Objectives

- ◆ We aimed to determine if disparities had an impact on the outcome of endovascular thrombectomy treatments in a single center site.
- ◆ Area Deprivation Index (ADI) was used to classify a patient's neighborhood socioeconomic status (10 is highest level of disadvantage).
  - ◆ 17 census variables designed to describe socioeconomic disadvantage based on income, education, household characteristics, and housing
- ◆ Distance, Median Household Income, Gender, Race, Insurance
- ◆ Access and Quality

# Stroke Dataset

- ◆ We conducted a retrospective observational analysis over 5-year study period at a comprehensive stroke center between 2016 and 2021
- ◆ Chi-square and independent sample t-test analysis were used to determine if an association exists between patient specific factors and stroke care services.
- ◆ Dataset:
  - ◆ Get with the Guidelines
  - ◆ 2016 to 2021
  - ◆ Populations included
    - ◆ Ischemic Stroke- TIA, SVO, MVO, LVO
    - ◆ Hemorrhagic Stroke: SAH and Intracerebral Hemorrhage
- ◆ Stroke team the primary source of data collection
- ◆ Primary: TICI, NIHSS post thrombectomy
- ◆ 2nd Outcome measures: mRS (0 to 6), comfort measures, Rehab and Disposition

# EVT

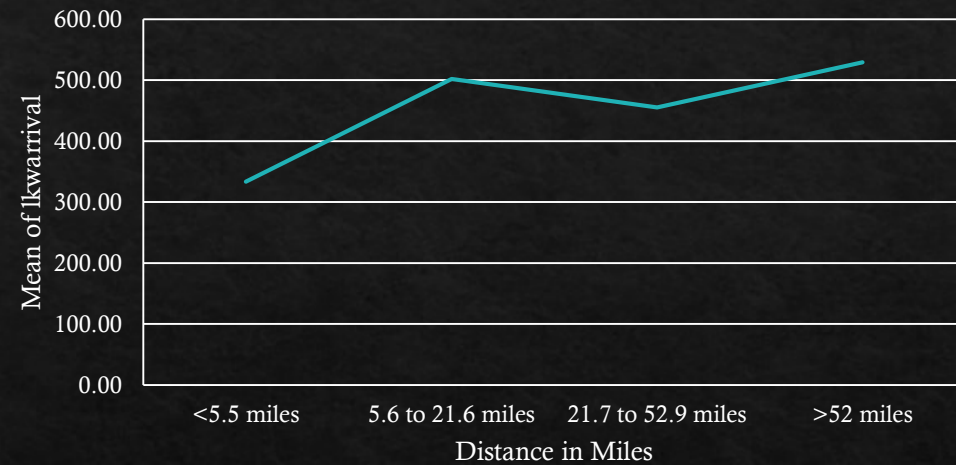

Individual-level variables	N(%)	Mean(std dev)
Age	306	70.51
<b>Gender</b>		
Male	145(47.4)	
Female	161(52.6)	
<b>Race/Ethnicity</b>		
White	276(90.2)	
Black or African-American	24(7.8)	
Asian	4(1.3)	
Asian Indian	1(0.3)	
Other/UTD	1(0.3)	
<b>Median Household Income</b>		58,914.49 (16,266.02)
<\$30,000	3(1)	
\$30,000-\$59,999	154(52.9)	
\$60,000-\$99,999	128(44)	
>\$100,000	6(2.1)	
<b>ADI</b>		8.77(1.02)
<9	118(40.1)	
>9	176(59.9)	
<b>Insurance Status</b>		
Medicare	207(67.6)	
Non-Medicare	99(32.4)	
<b>BMI</b>		
<18.5	8(2.6)	
18.5-24.99	87(28.7)	
25-29.99	91(30)	
≥30	117(38.6)	
<b>HbA1c</b>		
<5	20(7.4)	
5-7.49	222(82.2)	
7.5-9.99	20(7.4)	
≥10	8(3)	
<b>Smoking Status</b>		
Smoker	48(15.7)	
Non-Smoker	258(84.3)	

- ◆ 3555 subjects over the 5-year cohort with an ischemic stroke
- ◆ 635 subjects were diagnosed with acute large artery atherosclerosis.
- ◆ 1398 diagnosed with a Cryptogenic Stroke
- ◆ 346 with a thrombectomy between 12/2015 and 12/2021
  - ◆ 192 (55.5%) Cardioembolic
  - ◆ 86 (24.9%) Large artery atherosclerosis
  - ◆ 25 (7.2%) Cryptogenic
  - ◆ 24 (6.9%) Other
  - ◆ 6 (1.7%) Small Vessel

# Distance

- ◇ Average 161.8 miles
- ◇ No impact on mRS or TICI score

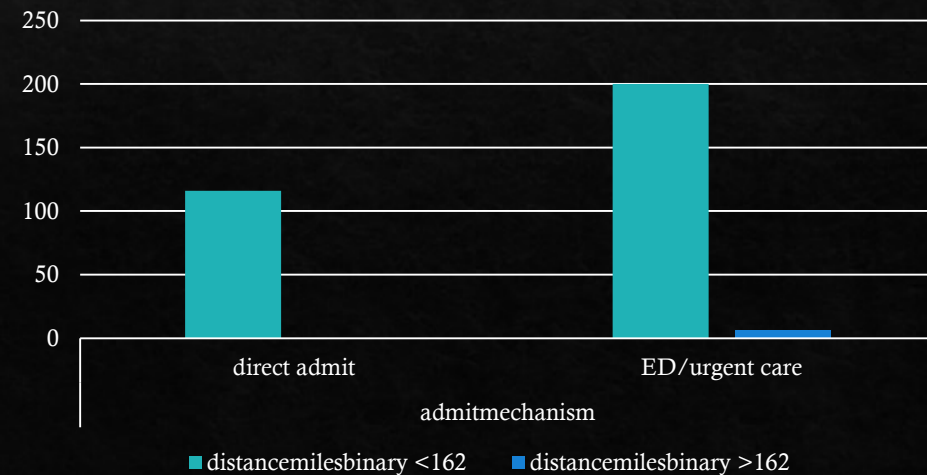

Distance and time to arrival from LKW

DISTANCE AND INCOME

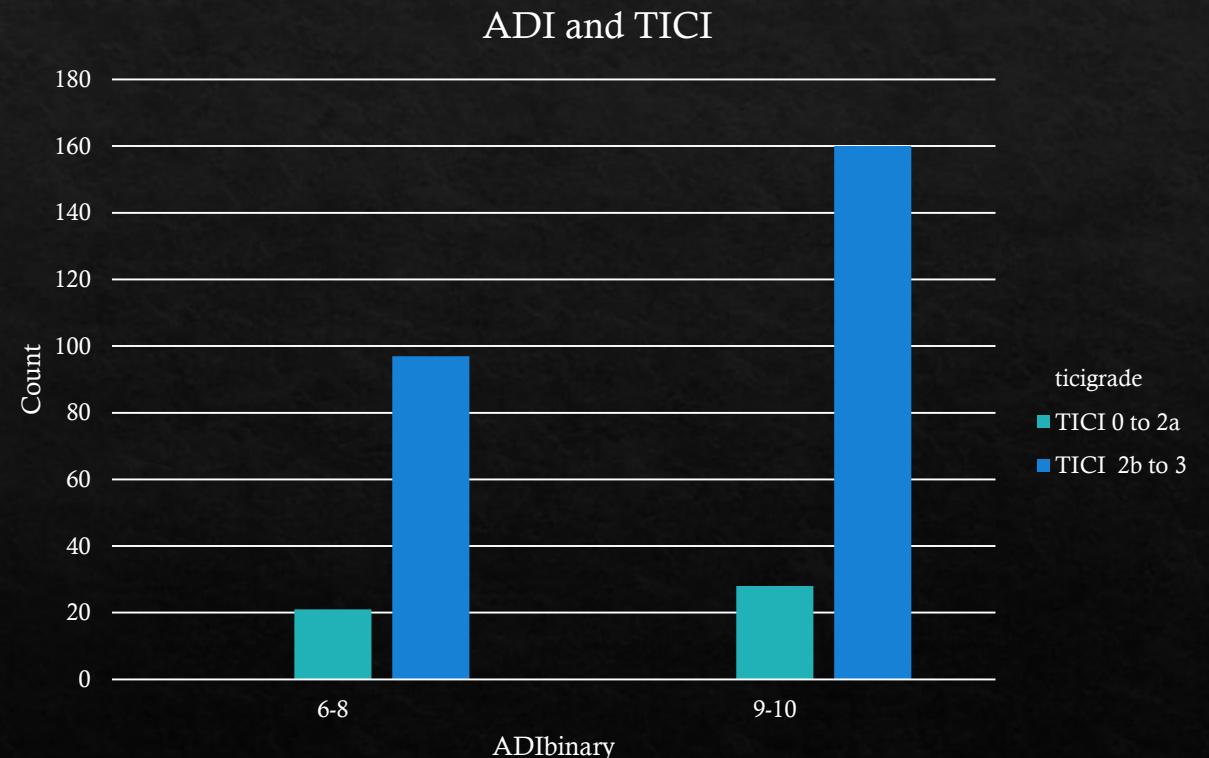

Distance and Admission type

# ADI

	ADI		
	6-8	8-10	p-value
<i>Age</i>	73.9	68.4	<0.05
<b>Labs</b>			
BMI	29.6	29.6	>0.05
HbA1C	6.2	6.1	>0.05
LDL	82	81.3	>0.05
<i>Median Household Income</i>	69826.8	51417.7	<0.05
<i>Distance (miles)</i>	347.7	37.4	<0.05
<b>NIHSS admission</b>	16.0	15.5	>0.05
<b>NIHSS following EVT</b>	17.6	15.9	>0.05
<b>LKW to door</b>	511.4	400.6	>0.05
<b>LKW and CT Completion (mins)</b>	410.0	325.7	>0.05
<b>LKW and arterial puncture (mins)</b>	780.3	507.3	>0.05
<b>LKW and firstpass (mins)</b>	906.2	874.6	>0.05

ADI not associated with mRS, TIC1, rehab disposition, comfort measures or LOS

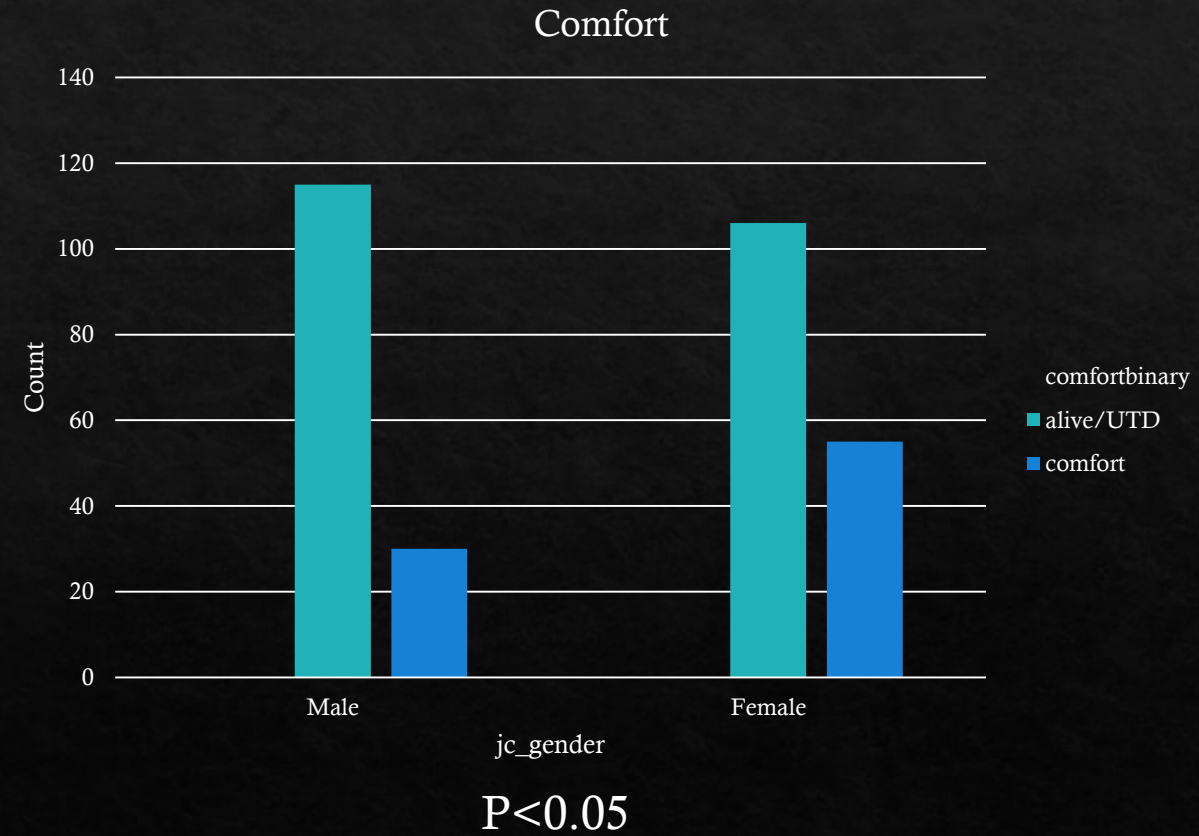

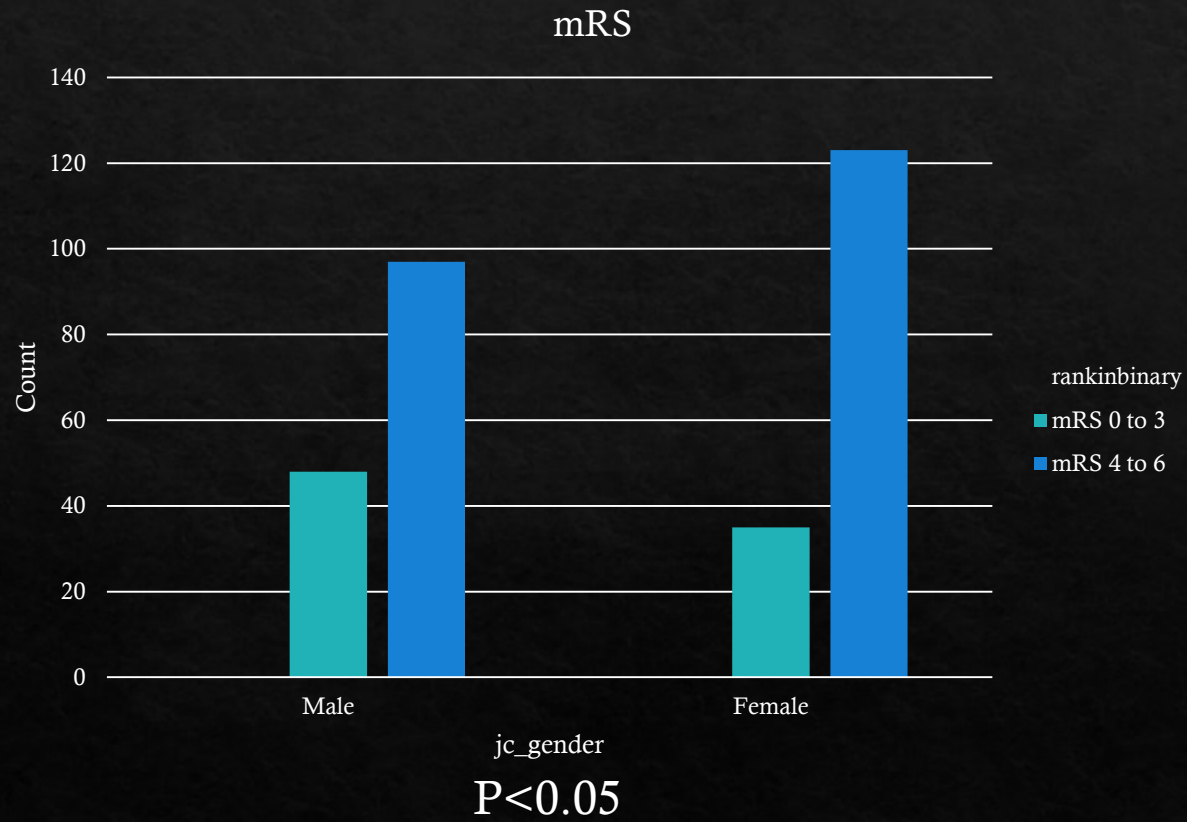

# Income

Bar Chart

- ◇ Income as a binary variable not associated with TICI, mRS, rehab or comfort measures, or LOS
- ◇ Wasn't associated with time intervals

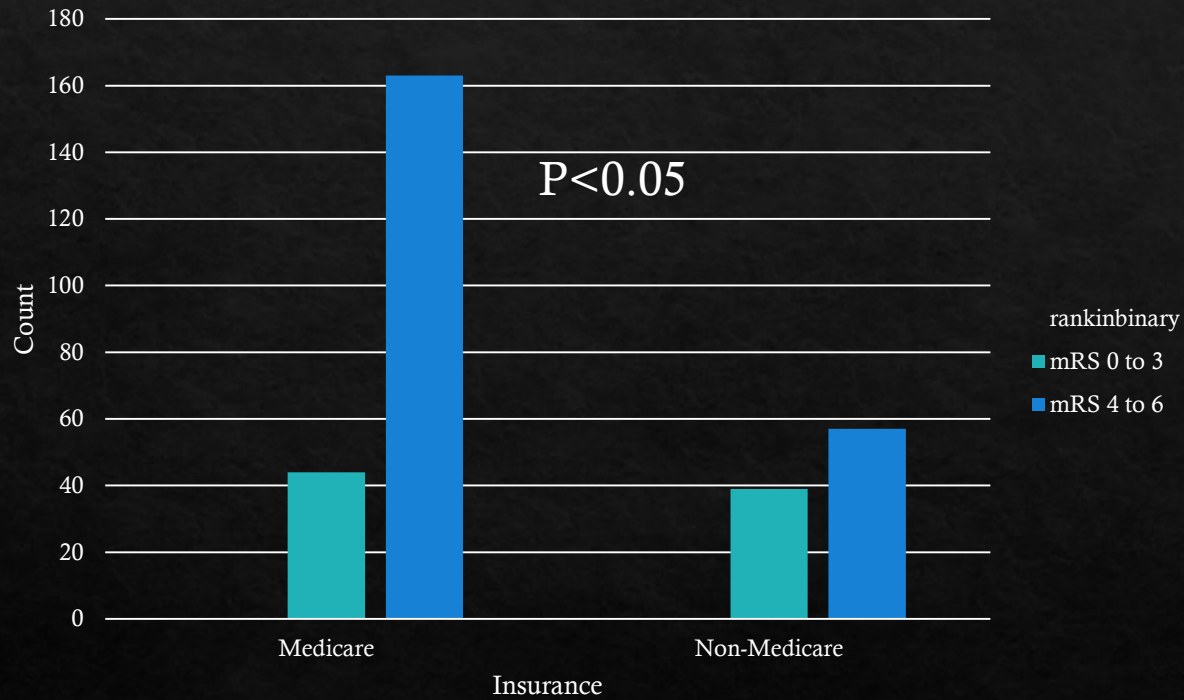

# Gender

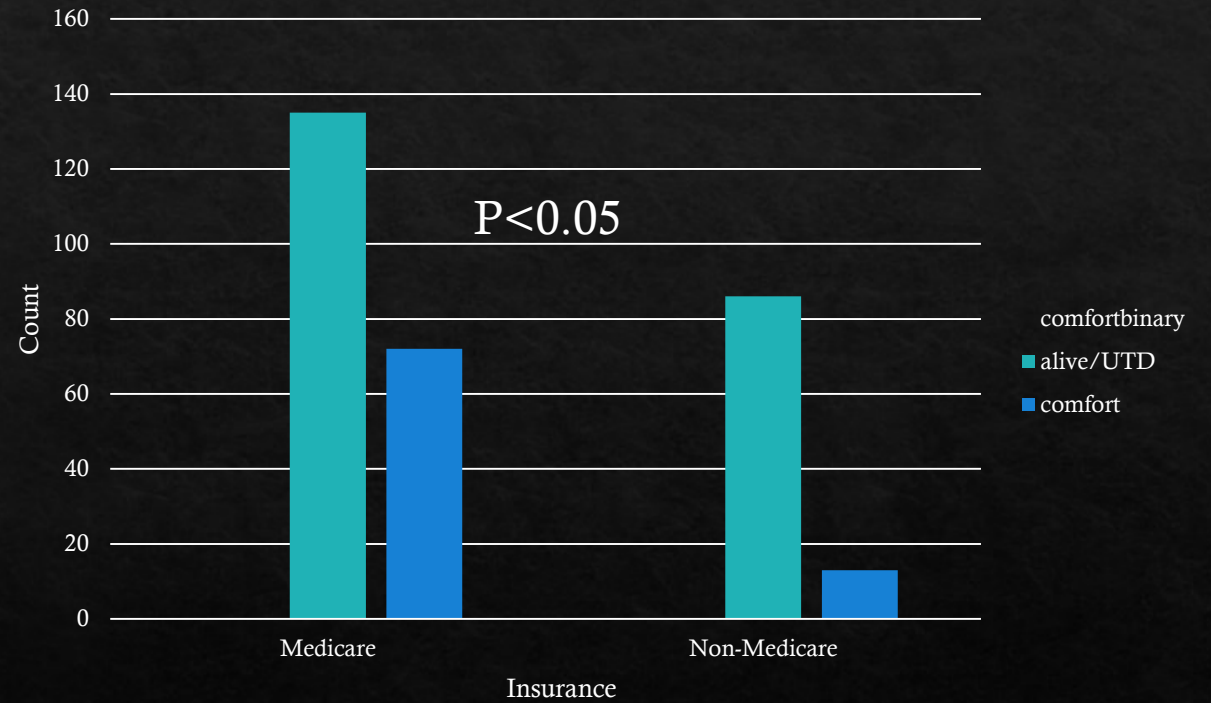

# Insurance

## Medicare and mRS

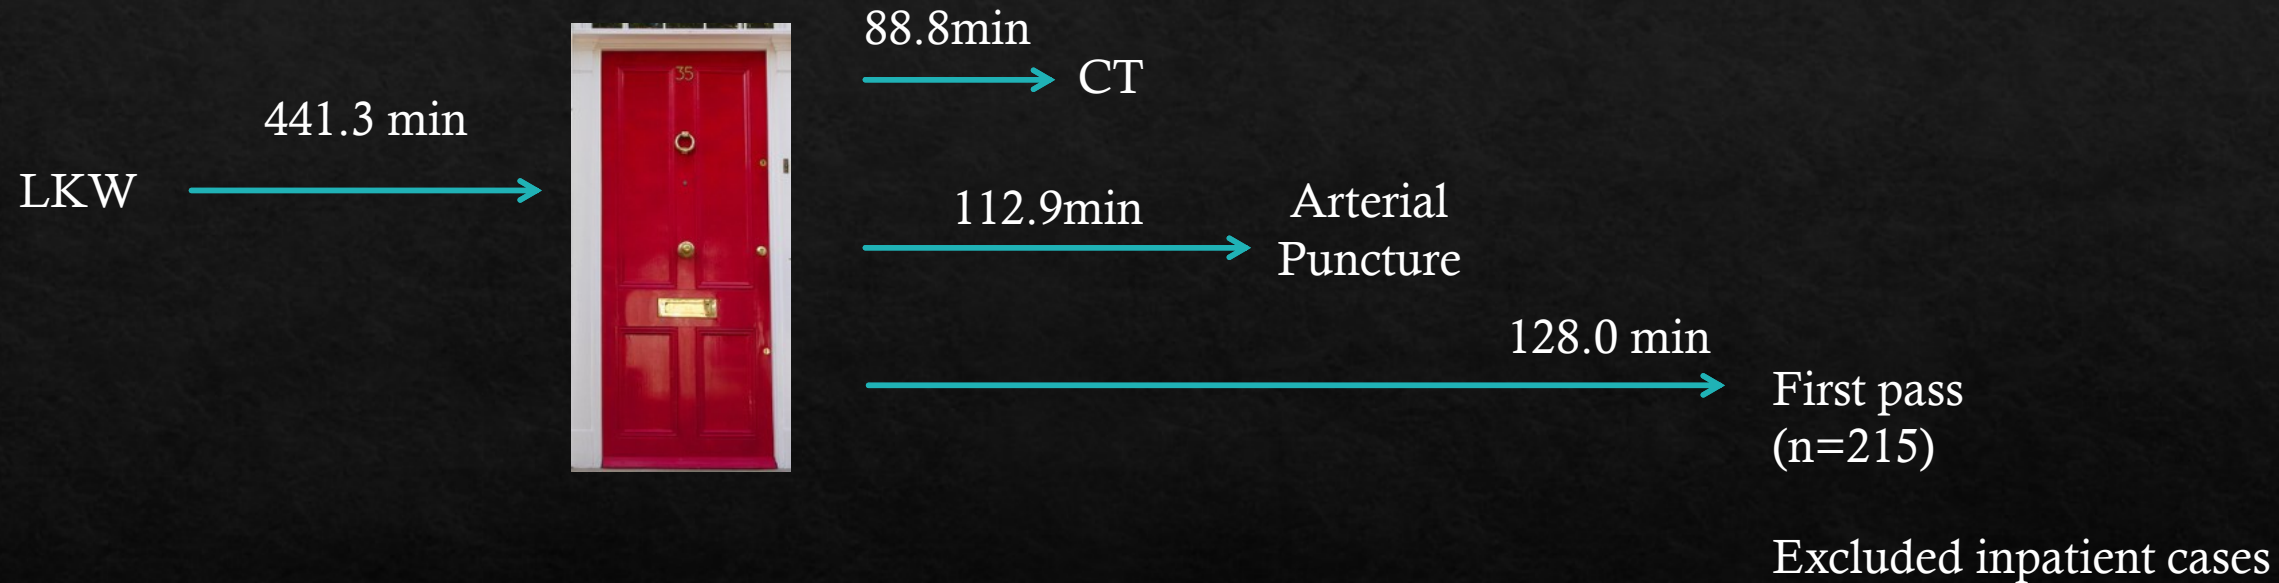

## Comfort measures

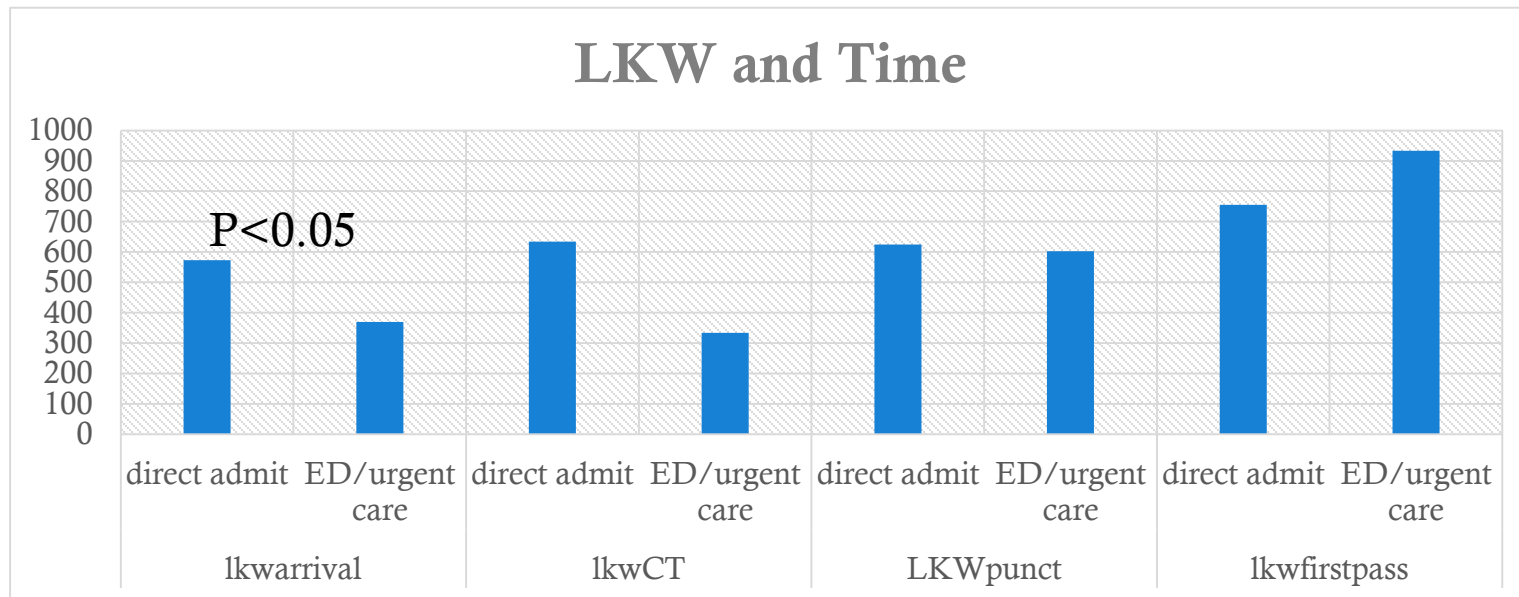

Rehab and TICI not associated

# timing

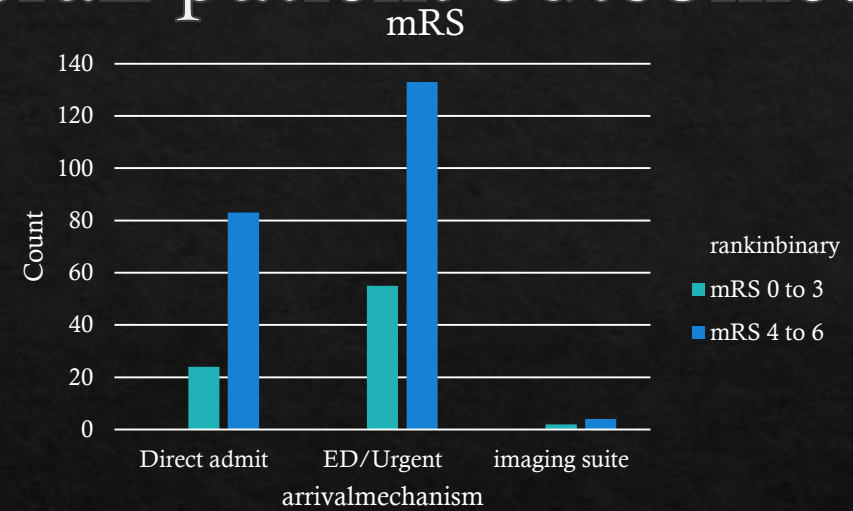

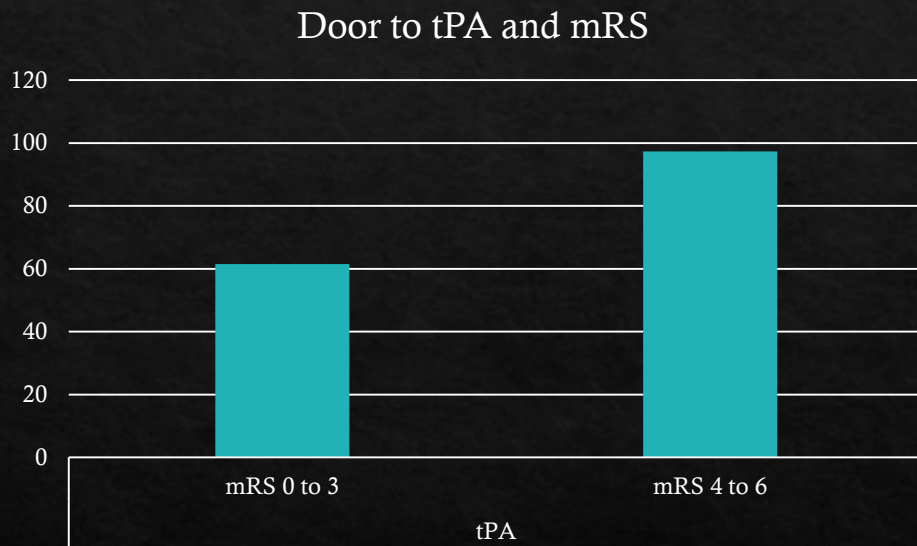

No statistical differences in time parameters for ADI, income or insurance  
Lower 50% of income had relationship with direct admission  
Higher 50% of income “ “ “ “ with ER

# Time

# How does it influence the overall patient outcome?

Absolute terms appear different, but not statistically significant

# TICI

	TICI 0 to 2a	TICI 2b to 3	p-value
Age	70.6	70.5	<0.05
Labs			
BMI	<b>31.3</b>	<b>28.5</b>	<b>&lt;0.05</b>
HbA1C	6.3	6.1	>0.05
LDL	88.5	80.4	>0.05
ADI	8.5	8.8	>0.05
Median Household Income	60,849.6	58541.8	>0.05
NIHSS admission	14.7	15.9	>0.05
NIHSS following EVT	16.2	16.5	>0.05
Distance (in miles)	37.4	202.2	>0.05
Time LKW and CT Completion (mins)	292.4	413.9	>0.05
Time between LKW and arterial puncture (mins)	408.5	613.7	>0.05
Time between LKW and firstpass (mins)	474.2	690.0	>0.05
Time b/w firstpass/arterial puncture(mins)	24.6	41.7	>0.05

# Conclusions

- ◆ We describe limited patient socioeconomic and stroke care factors associated with EVT outcome in a comprehensive stroke center with a largely socioeconomic disadvantaged population.
- ◆ Further in-depth analysis is required to elucidate the barriers to access and quality of care
- ◆ Study the discrepancy in # of patients with ischemic stroke (N=3470) who may have otherwise been candidates for EVT is needed but didn't meet criteria
- ◆ Personal interests: Looking into SAH/ICH populations

Thank you!

Upstate Stroke team!
